# **SVELTE - QUICK TUTORIAL**

## **EXPRESSIONS**

## **CONDITIONAL RENDER**

```
{#if condition}
  Condition is true
{:else if otherCondition}
  OtherCondition is true
{:else}
  Any Condition is true
{/if}
```

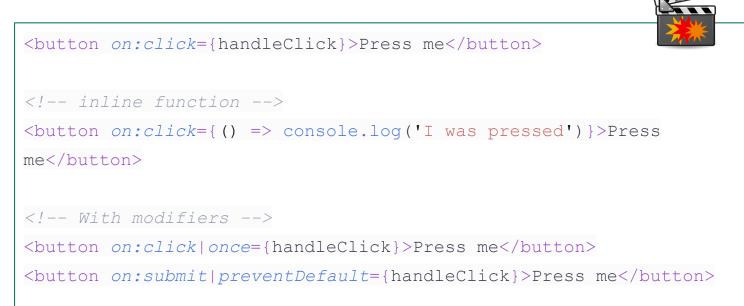

## **AWAIT PROMISE IN TEMPLATE**

```
{#await promise}
    <!-- promise is pending -->
    waiting for the promise to resolve...
{:then value}
    <!-- promise was fulfilled -->
    The value is {value}
{:catch error}
    <!-- promise was rejected -->
    Something went wrong: {error.message}
{/await}
```

## **RENDER HTML**

## **HANDLE EVENTS**

## Forwarding event

```
<script>
  import { createEventDispatcher } from "svelte";
  const dispatch = createEventDispatcher();

</script>
<!-- first param is the event name and the second is the value -->

<button on:click={() => dispatch('message', { text: 'Hello!' })}>

  Click to say hello

</button>
<!-- forwarding default event -->

<button on:click>Press me</button>
```

## SIMPLE DATA BINDING

```
<MyLink href={href} title="My Site" color={myColor} />
```

#### For when props and variable match

```
<MyLink {href} title="My Site" color={myColor} />
```

#### Spreding props

```
/*script>
import MyLink from "./components/MyLink";

let link = {
    href: "http://www.mysite.com",
    title: "My Site",
    color: "#ff3300"

};

//script>

//script> />

//script> />
```

## TWO WAY DATA BINDING

```
<MyInput bind:value={value} />
```

#### For when props and variable match

<MyInput bind:value />

#### Binding groups

```
<!-- grouped radio inputs are mutually exclusive -->
<input type="radio" bind:group={tortilla} value="Plain" />
<input type="radio" bind:group={tortilla} value="Whole wheat" />
<!-- grouped checkbox inputs populate an array -->
<input type="checkbox" bind:group={fillings} value="Rice" />
<input type="checkbox" bind:group={fillings} value="Beans" />
```

#### **RENDERING A LIST**

```
  {#each items as item}
  {li>{item.name} x {item.qty}
  {/each}
```

#### With index

```
{ #each items as item, i}

{i + 1}: {item.name} x {item.qty}
{/each}
```

#### With unique key

# **SVELTE - QUICK TUTORIAL**

## **USING SLOT**

```
<!-- Widget.svelte -->
<div>
 <slot>Default content</slot>
</div>
<!-- App.svelte -->
<Widget />
<Widget>
I changed the default content
</Widget>
```

#### Multiple slot

```
<!-- Widget.svelte -->
<div>
<slot name="header">No header was provided</slot>
<slot>
Some content between header and footer
</slot>
<slot name="footer" />
</div>
<!-- App.svelte -->
<Widget>
<h1 slot="header">Hello</h1>
Copyright (c) 2020 Svelte Brazil
</Widget>
```

#### Expose values

```
<!-- FancyList.svelte -->
<u1>
{ #each items as item}
  <slot name="item" {item} />
{/each}
<!-- App.svelte -->
<FancyList {items}>
<div slot="item" let:item>{item.text}</div>
</FancyList>
```

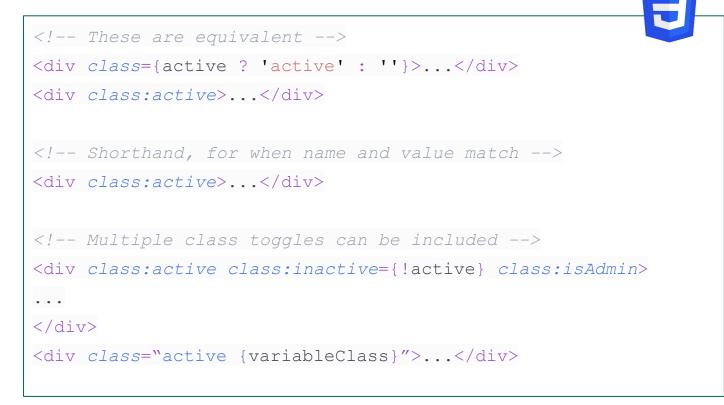

# **ANIMATIONS**

```
<script>
import { flip } from "svelte/animate";
import { quintOut } from "svelte/easing";
let list = [1, 2, 3];
</script>
{ #each list as n (n) }
<div animate:flip={{ delay: 250, duration: 250, easing: quintOut</pre>
} > { n } < / div >
{/each}
```

# REACTIVE EXPRESSIONS

```
<script>
export let num
// we don't need to declare `squared` and `cubed`
// - Svelte does it for us
$: squared = num * num
$: cubed = squared * num
</script>
```

## **CLASS BINDING**

## **LIFECYCLE**

beforeUpdate onMount afterUpdate onDetroy

## **STORE**

```
<!--store.js -->
import { writeable } from 'svelte/store'
export const myNumber = whiteable(0)
<!--app.svelte-->
<script>
import {myNumber} from './store.js'
</script>
<input type="number" bind:value={$myNumber} />
<label>Current value is {$myNumber}</label>
```

#### Others stores

**Derived** Readable Custom

### **TRANSITIONS**

```
<script>
 import { fade } from "svelte/transition";
</script>
{ #if condition}
 <div transition:fade={{ delay: 250, duration: 300 }}>fades in
and out</div>
{ / if }
```

#### Others transitions

Slide Blur Fly **Draw** Scale

## REACTIVE STATEMENT

```
<script>
let count = 0
$: if (count >= 10) {
  alert(`count is dangerously high!`)
  count = 9
</script>
```
